New in Exchange 2007

- ✚ Rich Outlook-like experience from any Internet connected computer with a supported browser provides encrypted access to the inbox, powerful search, and the ability to view different types of attachments.
- ✚ OWA 2007 enhancements include a new Scheduling Assistant to help employees efficiently book meetings, fast server-side search as well as new features to access documents and attachments more easily from outside the office.

Small and Medium businesses would greatly benefit from the robust features of Microsoft™ Exchange, but the expense for hardware, software, networking infrastructure and professional administration puts an in-house solution out of reach for most small businesses. Managed Hosting provides a cost effective method for businesses to acquire the messaging and collaboration capabilities of Exchange 2007 without the headaches and overhead of doing it themselves. More and more businesses today are using hosted messaging solutions. Couple these benefits with Systems Vault's professionally administered Firewall, Gateway Anti-Spam, Anti-Virus, and Intrusion Protection Service (IPS) and you have a highly secure, reliable, and scalable Exchange Environment to support your business.

Let Systems Vault demonstrate the benefits, surprising affordability and cost savings of Hosted Exchange for your business. If you currently using POP3, or Exchange 2003 or older we can help. Call us today at 702.481.2300 or toll free at 1.800.785.5018, email us at info@systemsvault.com or visit us online at www.systemsvault.com.
